CURTAIN SIDER - DOOR RETAINER

MATERIAL

**Aluminium Profile - Plastic end Caps.
Rubber protective arm.**

DESCRIPTION

The spring loaded retainer is polyurethanelled against a high grade steel compression spring. The compression spring is located inside a sealed aluminium profile housing which is tightened by plastic end covers and protected against dirt and humidity by O-rings. The plastic cover on the front side is fitted with counter sunk stops which hold the arm in the released position and prevent it moving into a position other than that required. The aluminium strip comes with two longitudinal channels for holding the two, infinitely adjustable fixing brackets which are screw or weld-mounted to the vehicle. The internal parts are galvanized, smooth-running and maintenance-free. The spring loaded arm has a stroke of approx. 230 mm.

SPECIFICATIONS

70822ZP

CURTAIN SIDER - LARGE DOOR RETAINER

MATERIAL

Mild Steel Zinc Plated

SPECIFICATIONS

DESCRIPTION
